A delegation consisting of representatives from National AIDS Control Society, Ghana and some selected NGOs in the country visited the institute on April 23, 2014. The delegation interacted with institute’s faculty members and coordinators of NFHS-4 on process and protocols of community based HIV testing in India as part of different rounds of NFHS, the Indian version of DHS. During the interaction, members of the delegation were specifically interested in IIPS experience of maintaining the quality of data including mechanisms to ensure quality of CAB data. NFHS-4 coordinators highlighted five prone strategies to address non sampling errors in large scale surveys and also highlighted the strategies to ensure quality of HIV data both at the level of preparing and transportation of DBS and also in the laboratory in testing.
